

Diagnosis of chemical-induced effects
in *Myriophyllum spicatum*
using metabolomics

Von der Fakultät für Chemie und Physik
der Technischen Universität Bergakademie Freiberg

genehmigte

DISSERTATION

zur Erlangung des akademischen Grades

doctor rerum naturalium

Dr. rer. nat.

vorgelegt

von Diplom Chemikerin Janet Riedl

geboren am 18.01.1980 in Gera

Gutachter: Prof. Dr. Hermann Heilmeier

Prof. Dr. Matthias Otto

Tag der Verleihung: 17. Juli 2014

Table of Contents

Summary	I
General structure	V
Table of contents	VI
List of abbreviations.....	IX
1. Current challenges in ecotoxicology	2
2. Relevance of aquatic macrophytes and metabolomics.....	4
2.1. Ecological functions & Phytotoxicity assessment	4
2.2. An omics perspective	6
2.3. The idea spreads into various research fields.....	8
2.4. Dynamic methodological developments	10
3. Introducing a multivariate metabolic endpoint into an ecotoxicological effect assessment framework	12
3.1. Monitoring tools & Effect diagnosis.....	12
3.2. Concentration and time as variables in metabolomics studies	17
3.3. Aims & Experimental studies	20
3.4. Combining ecotoxicological approaches and metabolic fingerprinting.....	24
4. The metabolic effect level index links multivariate metabolic fingerprints to ecotoxicological effect assessment.....	30
4.1. Introduction on biochemical responses of aquatic plants.....	31
4.2. Material & Methods of the bioassay investigation.....	34
4.2.1. <i>Test system and design</i>	34
4.2.2. <i>Metabolic fingerprinting analysis</i>	36
4.2.3. <i>Multivariate statistics & Effect analysis</i>	38
4.3. Results of isoproturon exposure.....	42
4.3.1. <i>Treatment selection based on functional and apical endpoints</i>	42
4.3.2. <i>Metabolic fingerprints of M. spicatum after isoproturon exposure</i>	44
4.3.3. <i>Effect estimation with projection analysis and MELI</i>	47
4.3.4. <i>Comparison of fingerprinting-based effect estimation approaches</i>	50
4.3.5. <i>Effect comparison from different levels of biological organization</i>	51
4.4. Discussion on effect estimation and interpretation	54
4.4.1. <i>Effect observation in the macrophyte bioassay</i>	54
4.4.2. <i>Ecotoxicological effect estimation for multivariate responses</i>	56
4.4.3. <i>Adverse outcome pathway for M. spicatum exposed to isoproturon</i>	59
4.4.4. <i>Are metabolic fingerprints indicative for stress or toxicity?</i>	61

5. Uncovering subtle chemical-induced effects in metabolic fingerprints using regression-based chemometric tools	64
5.1. Introduction of environmental exposure and information-rich fingerprints	65
5.2. Material & Methods of the microcosm investigation.....	67
5.2.1. Test system and design	67
5.2.2. Metabolic fingerprinting analysis	68
5.2.3. Statistical analysis & Compound determination	70
5.3. Results of metabolic effect detection.....	73
5.3.1. Key figures of metabolic fingerprints	73
5.3.2. Data quality inspection & Correction measures.....	74
5.3.3. Effect exploration with chemometric tools	76
5.3.4. Confirming the concentration-dependent effect as plant response.....	80
5.4. Discussion on systematic variation and ecotoxicological effects	86
5.4.1. The uncovered metabolic fingerprint.....	86
5.4.2. The sensitive metabolic fingerprint.....	89
6. Spatial and temporal variation in metabolic fingerprints of field-growing <i>Myriophyllum spicatum</i>	94
6.1. Introduction.....	95
6.2. Material & Methods	97
6.2.1. Field investigation	97
6.2.2. Metabolic fingerprinting analysis	99
6.2.3. Statistical analysis.....	100
6.3. Results.....	102
6.3.1. Key figures of GC-MS-based <i>M. spicatum</i> metabolic fingerprints.....	102
6.3.2. Metabolic variation of biological replicates of field-growing <i>M. spicatum</i>	103
6.3.3. Pattern analysis of metabolic fingerprints of <i>M. spicatum</i>	103
6.3.4. Metabolic fingerprints in relation to environmental parameters	104
6.3.5. Stoichiometry and amount of low molecular weight compounds	106
6.4. Discussion	108
6.4.1. Metabolic fingerprinting on field-growing individuals of <i>M. spicatum</i>	108
6.4.2. Spatial and temporal variation of metabolic fingerprints.....	109
6.5. Conclusion	112
7. Diagnosis of field-relevant exposure and organism performance using metabolic fingerprints of <i>M. spicatum</i>	114
7.1. Concentration-fingerprint relationships – more than the sum of its single components	115
7.2. From lab to field – metabolic responses at different tiers, compared to environmental exposure & directed by study design	119
7.2.1. The influence of exposure-relevant and confounding factors.....	119
7.2.2. Sensitivity – a matter of population state and data evaluation?.....	124
7.2.3. Discriminative power through specific pattern and study design	126

Table of Contents

7.3. A broad response spectrum of metabolic fingerprints – the basis for MELI-based effect extrapolation..... 128

7.3.1. Characteristic metabolic responses along the effect cascade..... 128

7.3.2. The MELI links effect progression across different biological response levels.... 132

7.4. Reflecting the central hypotheses 135

8. A perspective for field and MELI applications 137

8.1. Applicability of metabolic fingerprinting for environmental monitoring 137

8.2. GC-MS-based fingerprints of *M. spicatum* as monitoring tool? 139

8.3. MELI and threshold concentrations as tools for predicting adverse effects 141

8.4. Further applications 142
